

Why use Kiely Bros for all waste streams

Commitment

Kiely Bros Ltd is committed to the continual improvement of the environmental management, delivering good environmental performance in all its operations and to provide the necessary organisation, commitment and training to fulfill this and other obligations. The senior management firmly believes in and is committed to the prevention of pollution and meeting its compliance obligations. Monitoring and improving environmental performance, pollution prevention and environmental protection and compliance with relevant environmental legislation, standards and other such requirements to which it subscribes.

Vision and values of the business

We're facing enormous challenges. It's the responsibility of us all to collaborate and work towards overcoming these, leaving a lasting positive legacy for future generations. As a business, all our actions and decisions are taken with a view to protecting the planet, supporting communities and delivering long-term value. These are the pillars that drive our sustainability vision.

Waste operations

The Kiely Waste division comprises of a waste transfer station and processing facilities in several locations around Birmingham. All sites are fully licensed through the Environmental Agency.

Kiely Waste transfer station takes construction waste from all over Birmingham and feeds our processing facilities combining a zero to landfill operation with a circular economy business model.

Effects of the circular economy for all waste streams

- Kiely Group has also invested in Biomass energy which has been operational for many years and provides a recycled fuel energy source to provide power back to the national grid. This operation has longevity with a long license and proven RHI & CHP funding.
- Customers can claim back carbon values from end use recycled products.
- 0 to landfill through the circular economy providing a carbon neutral basis for the supply chain.
